

Hill IFC™

Interferential Unit

Only \$1595

Four Channel Multi-Waveform Electro-Therapy Unit

The Hill IFC is a state-of-the-art interferential therapy device cleared by the FDA for multi-waveform, multiple channel use. Both outputs can be programmed to Start/Stop independently. The clinician can provide two different treatments simultaneously through the two outputs.

Hill IFC is a microcomputer controlled digital device featuring selectable modes:

- Interferential, with 5 preset programs P01-P05 (as Acute pain, Chronic pain, Edema 1, Edema 2 & Nerve Block)
- Premod
- Russian
- Galvanic (D.C. and Interrupted)
- TENS (Conventional, Burst, and Modulation)

The Hill IFC features easy-to-use, precise controls and a durable, professional design. The Hill IFC has a compact footprint and is lightweight for easy transport around the clinic.

Hill IFC Includes:

- Electro-Therapy Unit
- Stimulation Wires
- 5 Packs of Dual Sided Electrodes (2" x 2" square)
- 5 Packs of Hill Electrodes (2" x 2" square)

*Dual-Sided,
Clear Electrode*
