## The Evolution RMT™ “Repetitive Motion Therapy” Table

The Evolution RMT™ is the “Missing Link” for the treatment of lumbar disc syndrome patients. Treating with the Evolution RMT™ is based on the patient’s directional movement preference and provides measurable and positive outcomes particularly in the management of acute/chronic low back and leg pain patients. The Evolution RMT™ takes the patient through repetitive end-range passive-range-of-motion movements of flexion and/or extension. This reduces and “centralizes” the patient’s pain while increasing the patient’s active range of motion.

**There is nothing else like the Evolution RMT™ in the industry!**

## Evolution RMT™ Specifications

- Variable Cycle Speed
- Arm Rests
- One Year Warranty
- On-the-Fly changes to angle, speed and hold-time
- Sliding Face and Lower Sections for comfort during motion
- Movement: Just Flexion; Just Extension or both in one cycle
- Angle: Flexion and Extension controlled independently by doctor
- Slide-Out Foot Section
- Touch Screen Digital Readout
- Exact Measurable Movement
